

Systems Engineering: Meeting the Challenges of the 21st Century

Jon Wade
Associate Dean of Research
School of Systems and Enterprises
Stevens Institute of Technology
Hoboken, NJ

The Role of SE

Systems Engineering

What: Systems Engineering is an interdisciplinary approach and means to enable the realization of successful systems.

How: It focuses on defining customer needs and required functionality early in the development cycle, documenting requirements, then proceeding with design synthesis and system validation while considering the complete problem.

The Power of Scaling

CPU Transistor Counts 1971-2008 & Moore's Law

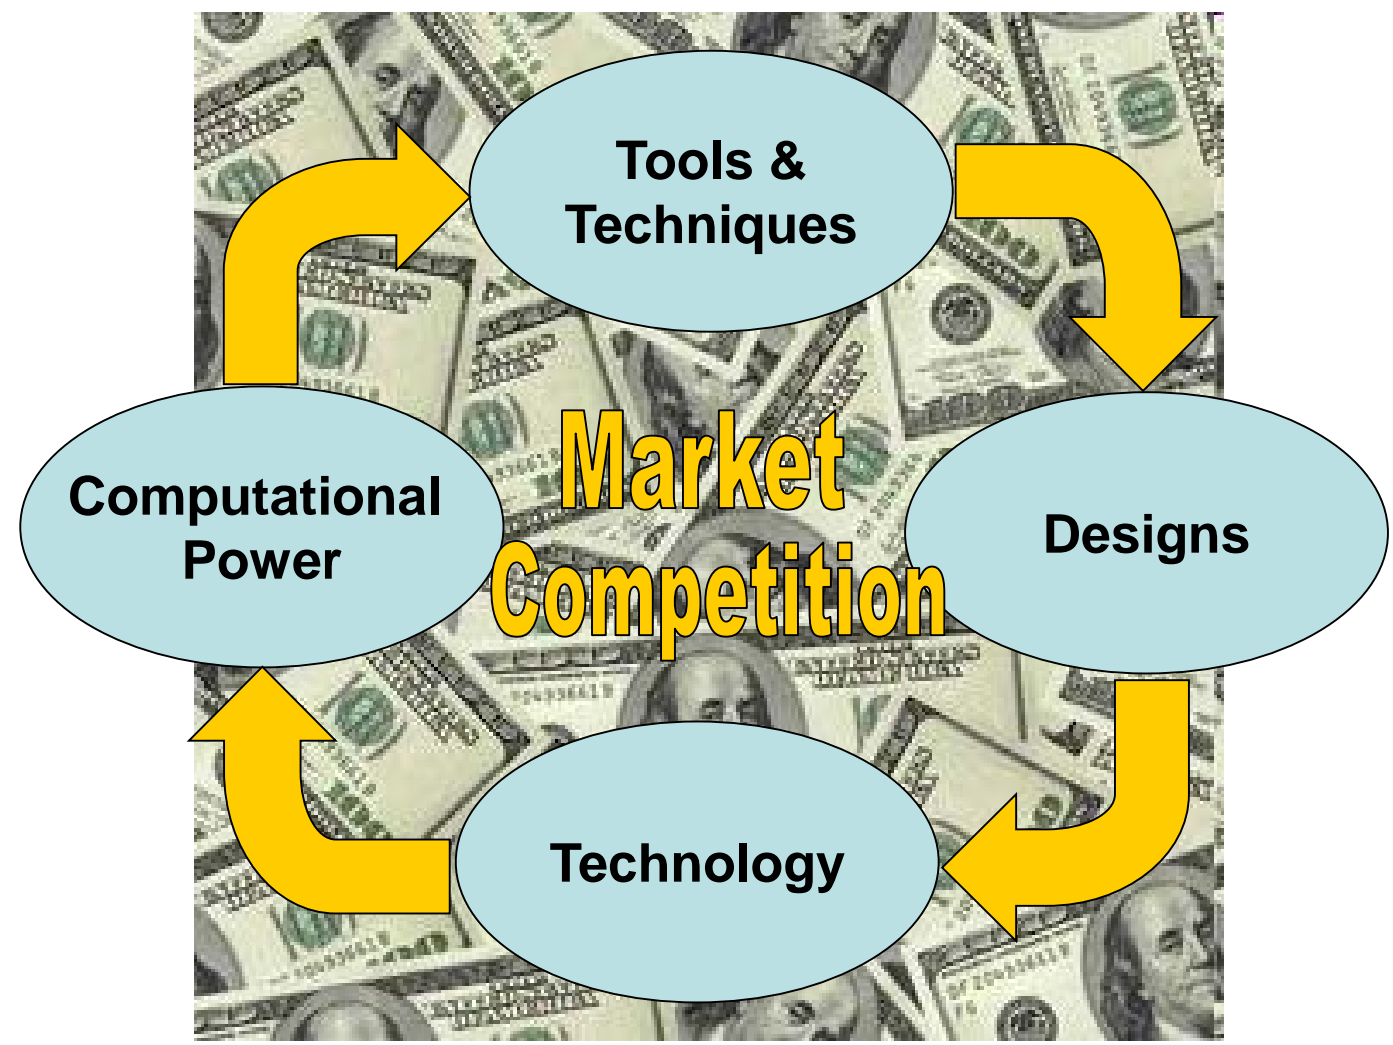

The density of transistors at minimum cost per device doubles every 24 months.

- Gordon Moore, 1965

The Networked Universe

System Trends

1. **Complexity:** adaptive & emergent
2. **Criticality:** essential to day to day life
3. **Security:** increasingly valuable & vulnerable
4. **Time Compression:** we're all on internet time
5. **Legacy:** unplanned, ill-suited & growing
6. **Workforce:** great diversity, youth are perhaps best equipped for change & virtualization

SE Practices

- Current SE practices, to a large degree, are an early mainframe era implementation based on the Systems Principles and Theory developed in the 1930's through 1950's.
- Traditional SE Methods, Processes and Tools (MPTs) are not appropriate for net-centric systems with dynamic requirements, swiftly changing technologies, short planning cycles and action oriented management and practitioners.
- Linear improvement cannot keep up with the exponentially growing demands that are enabled by the underlying technologies and amplified by the aforementioned trends.
- Human capabilities are not improving at exponential rates.

Is Systems Engineering on the Curve?

Transforming SE

We postulate that the new paradigm must be:

- **Agile:** Allowing for quality, timely development with an incomplete and changing set of system requirements.
- **Integrated:** Part of the main development process and not an additional set of discretionary tasks.
- **Lean:** Providing the greatest amount of benefits with the minimal number of steps and least amount of effort.

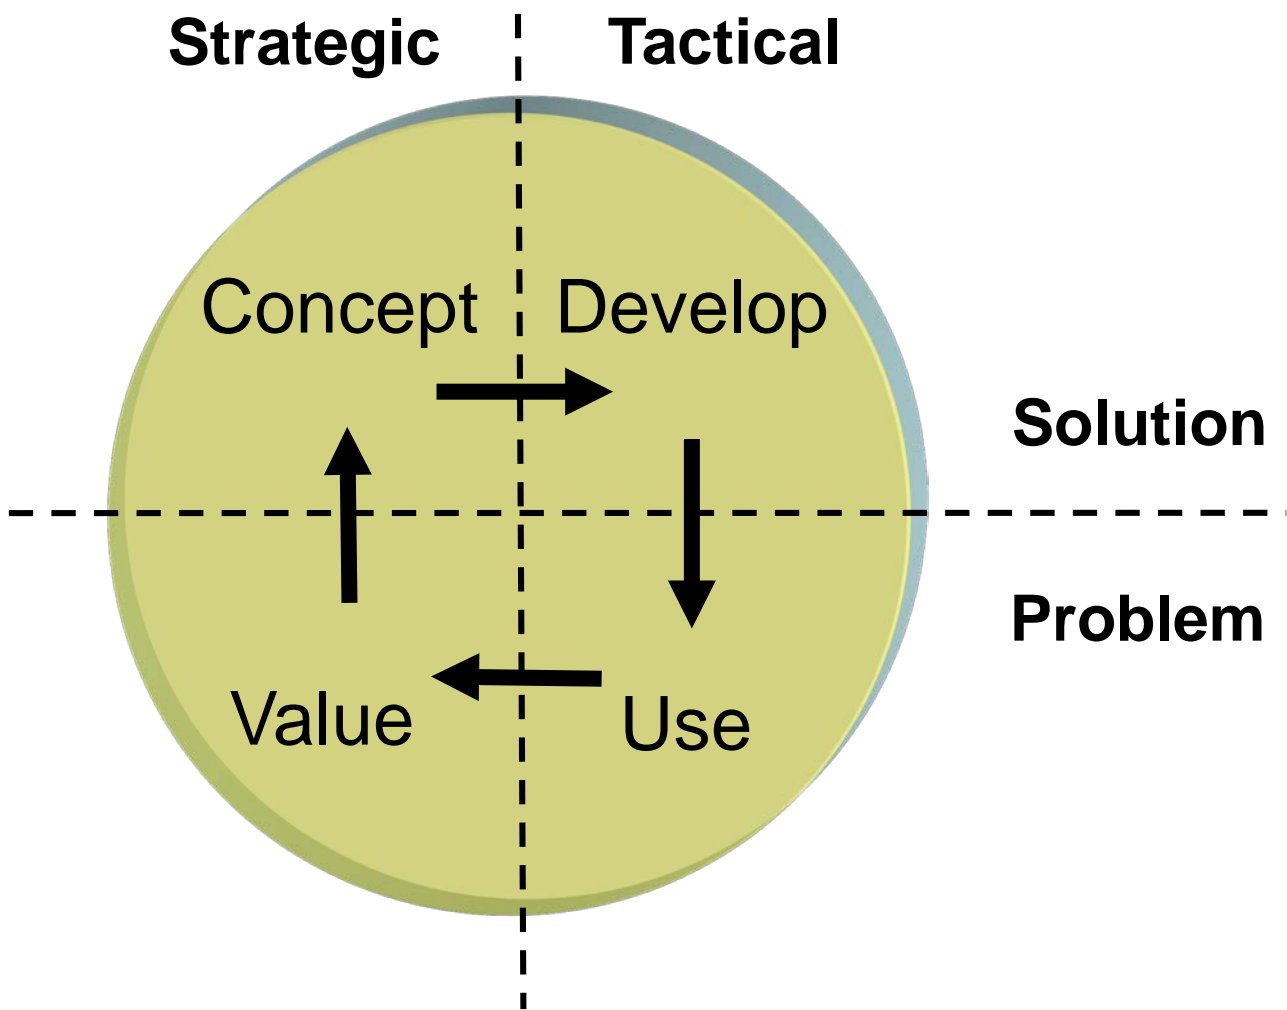

Transforming SE

We postulate that the new paradigm must be:

- **Leveraged:** Enabling exponential capability growth through the leveraging of computational and information technologies, and prior Systems work.
- **Extensible:** Providing the capability to expand and enhance capabilities for future growth without having to make major changes in the infrastructure.
- **Implementable:** Enabling widespread impact through workforce education and broad application.

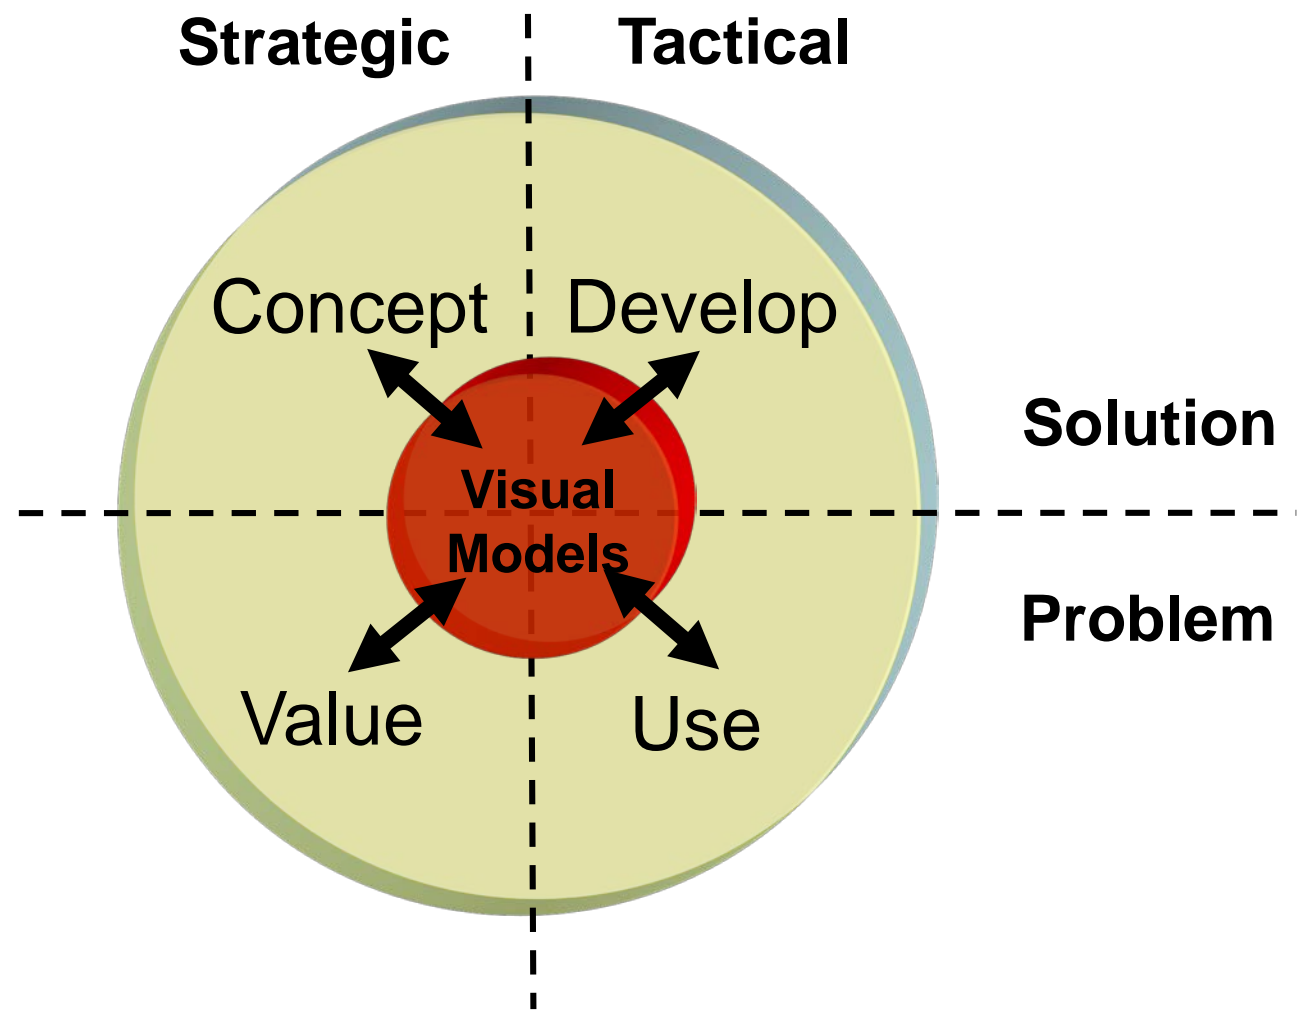

SE 'Phases'

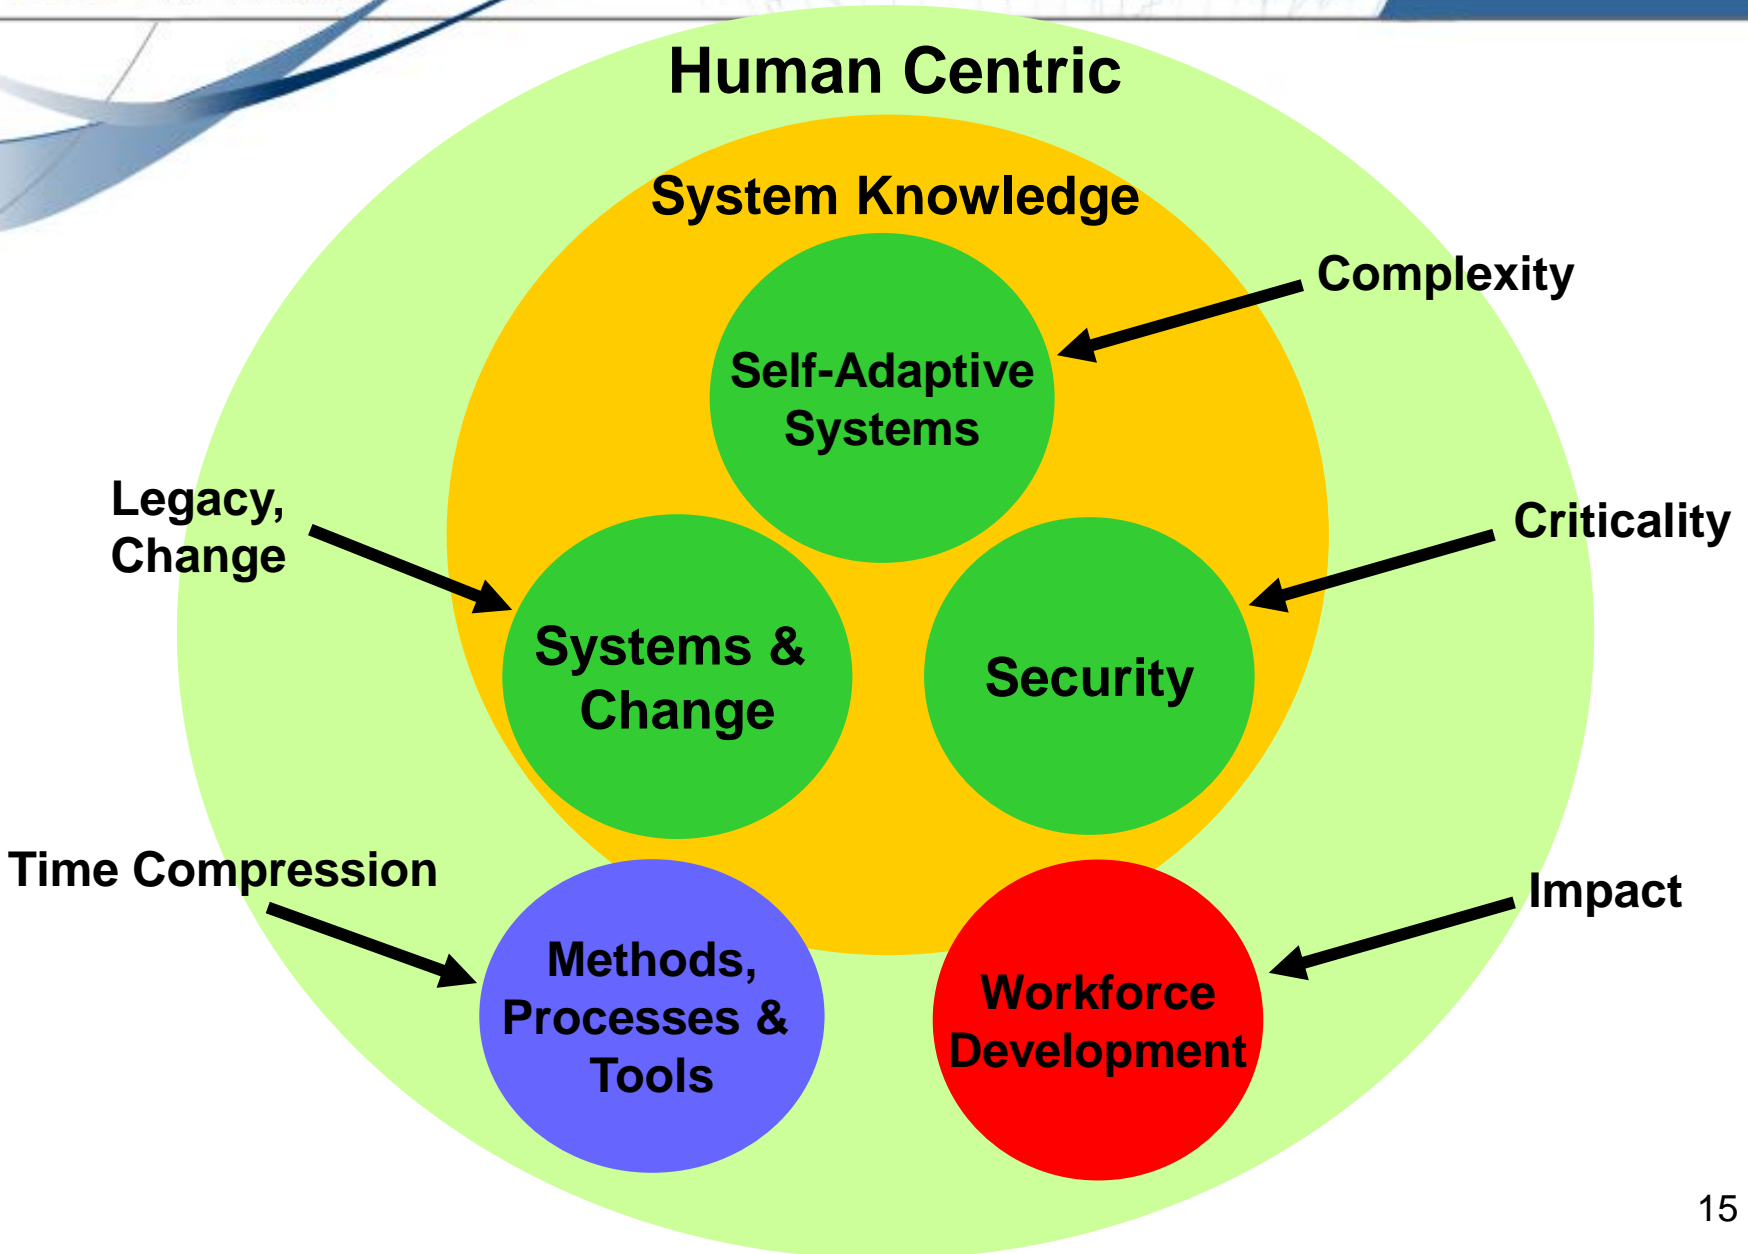

SE 'Phases'

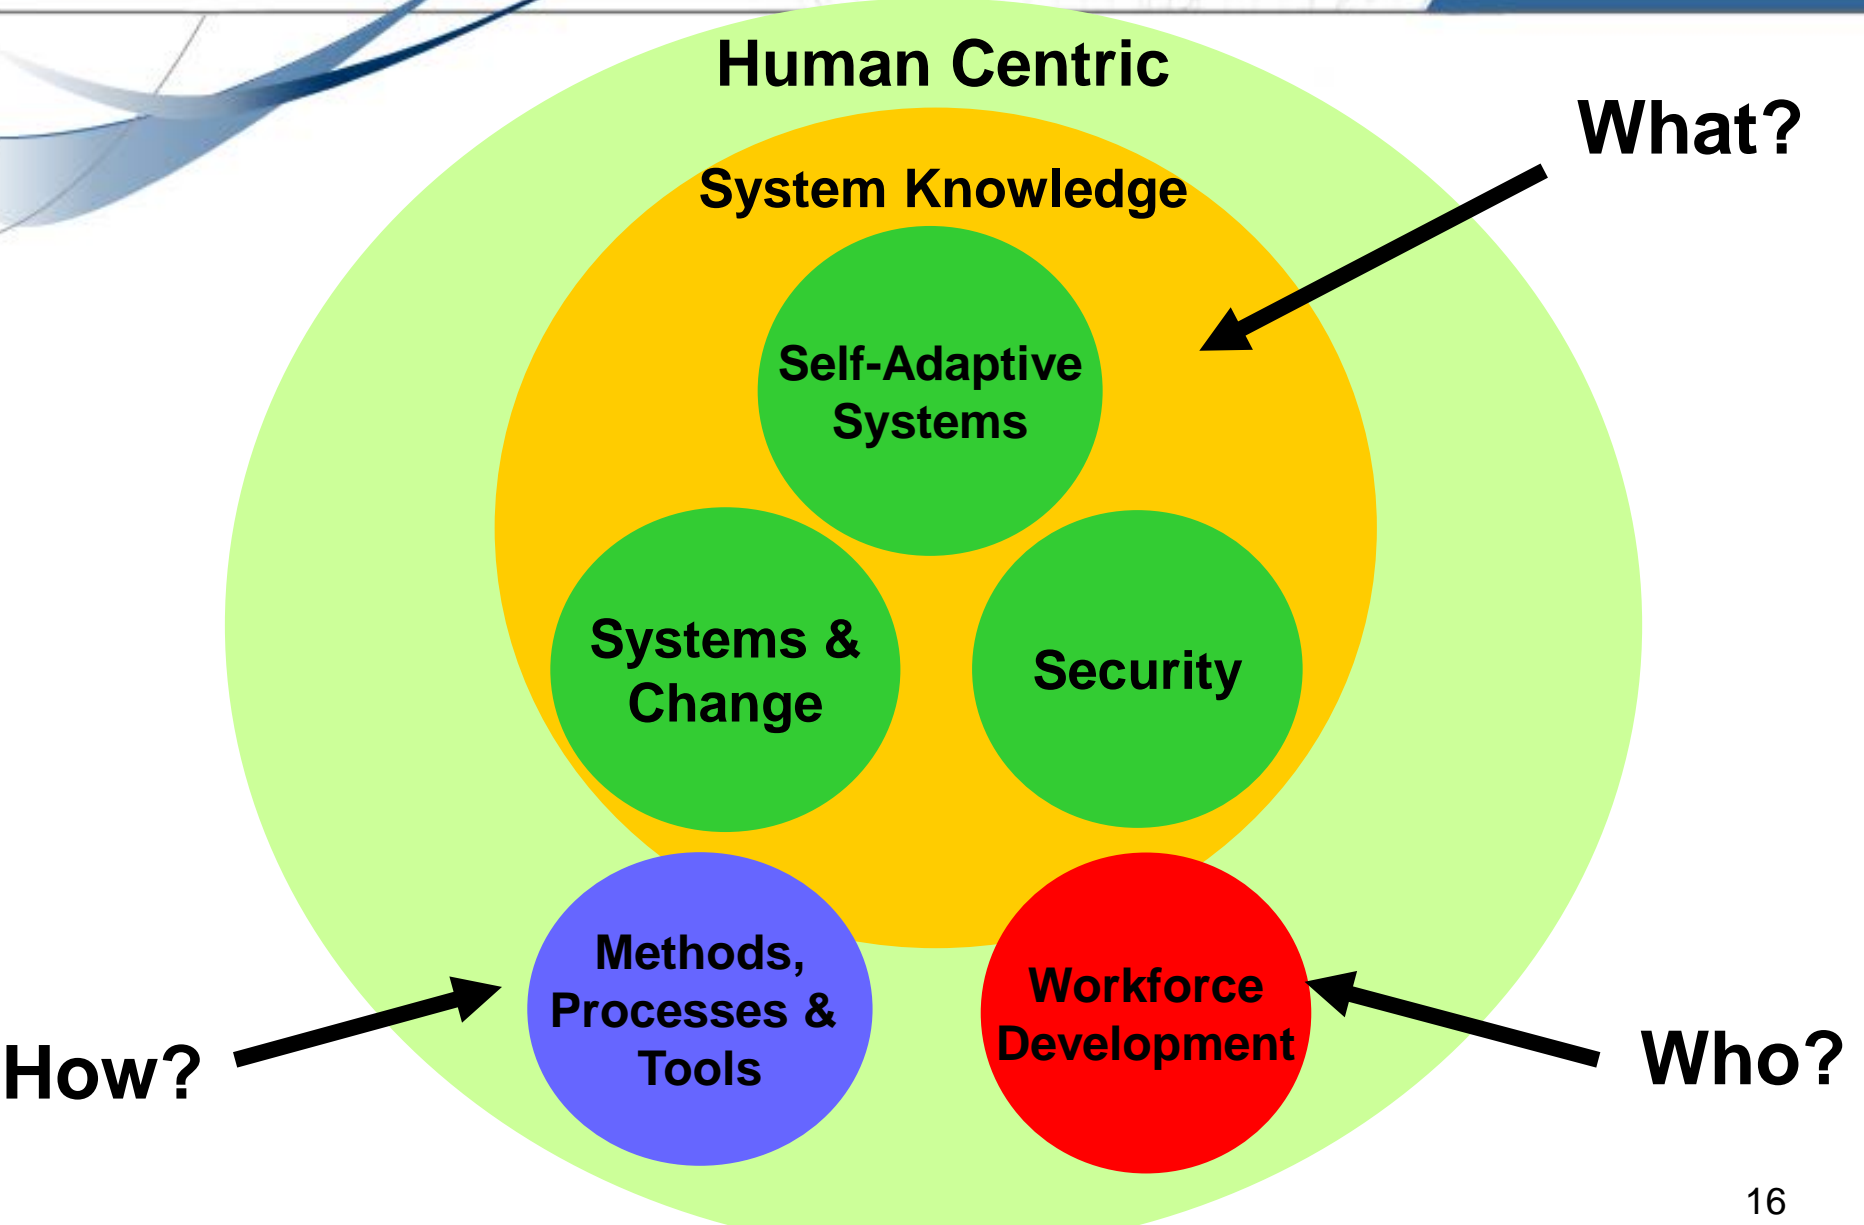

Necessary Changes

- Document based -> Model based
- Linear -> Opportunistic
- Sequential -> Consistent
- Human avoided -> Human integrated

SIT Research

Self-Adaptive Systems:

- Center for Complex and Adaptive Sociotechnical Systems - Ali Mostashari
- Resilient Systems - Roshanak Nilchiani
- Change-Adaptive Systems & Enterprises RT - Ali Mostashari

Systems & Change:

- Systems Development & Maturity Laboratory - Brian Sauser
- Systems Readiness Level - Brian Sauser
- Cost modeling - Jose Ramirez-Marquez

Security:

- Maritime Security Laboratory - Julie Pullen
- Center for Secure and Resilient Maritime Commerce - Michael Bruno - SES
- Security RT - Stas Tarchalski

SIT Research

How? - Methods, Processes & Tools:

- Graphical Conops RT - Rob Cloutier
- Evaluation of MPTs RT- Rich Turner
- System Engineering Transformation RT - Jon Wade
- Systemigrams - Brian Sauser
- Architectural Patterns - Rob Cloutier

Who? - Workforce Development:

- GSwe2009 - Art Pyster
- BKCASE - Art Pyster
- Technical Leadership RT - John Farr
- Asynchronous Learning - Alice Squires
- Experience Accelerator RT - Jon Wade
- Game Competition - Eirik Hole
- SE Competencies - Rashmi Jain
- CIESE - Beth McGrath

Model Aided SE

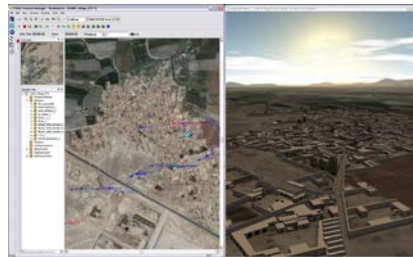

Which is more Intuitive?

Or Collaborative?

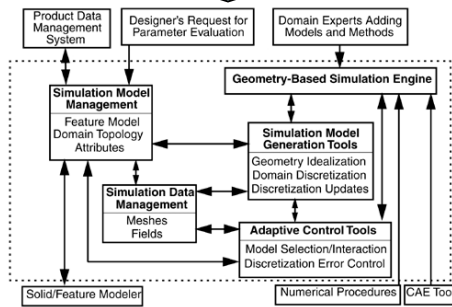

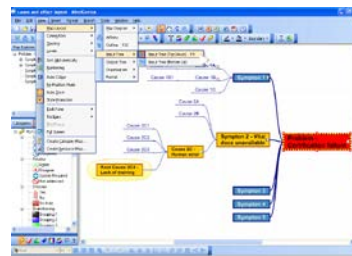

Portfolio of Canned Scenarios

Graphical interface to allow interactive, collaborative creation of modular CONOPS model

DOTMLPFP Simulator

Cause & Effect Analysis

Customizable Presentation of Results

Development of Systems Engineers

What's More Effective?
